

How to convert html to PDF in laravel ?

Solution :

Step1 : add following to your composer.json file

```
"barryvdh/laravel-dompdf": "0.6.*",
```

step2: update your composer using command.

composer update or php composer.phar update

step3: After update your composer. open app.php

path : config/app.php

Step4 : Add following line in 'providers'

```
Barryvdh\DomPDF\ServiceProvider::class
```

step5: Add following line in aliases

```
'PDF' => Barryvdh\DomPDF\Facade::class
```

step6 : suppose you want to use in your UserController then add following line above your class name.

```
use PDF;
```

step6: Suppose you want to print all user

Here is example

```
$user = User::all(); // from this you will get list of user and you ll render on view
```

```
return view('user.index', compact('resetUrl','user'));
```

similarly, if you want to generate PDF then you do following

```
$pdf = PDF::loadView('user.index', compact('user'));
```

//in view folder there is user folder inside that you have index file where you list all user

/---Below code generate your html view to PDF/

```
return ($pdf->download('user.pdf'));
```

// user.pdf is named for example , you can write as per your need.
