

## How to create modular based application in laravel ?

### Solution:

#### Step1:

Create Folder "**Modules**" inside "app/"

#### Step2:

Module1( suppose admin )

- Controllers

- Views

- Models

- routes.php

Module2( suppose API )

- Controllers

- Views

- Models

- routes.php

Similarly you can create multiple module

**Step3** : Create ModulesServiceProvider.php inside "Modules/" Folder

**Step4** : Paste following code inside ModulesServiceProvider.php
