How do I increase the PHP upload limits

Try increasing the following values in php.ini, for example:

```
memory_limit = 32M  upload_max_filesize = 24M  post_max_size = 32M
```

After making these changes, you may need to restart Apache.

```
/etc/init.d/httpd restart  OR  sudo service apache2 restart
```

Additional information

If the **upload_max_filesize** is larger than **post_max_size**, you must increase **post_max_size** so that it is bigger than **upload_max_size**.

If the value of **post_max_size** is larger than **memory_limit**, you must increase **memory_limit** so that it is larger than **post_max_size**.
