HOW TO VALIDATE STRONG PASSWORD VALIDATION IN LARAVEL ?

Solution :

$messages = ['password.regex' => "Your password must contain 1 lower case character 1 upper case character one number"];
$validator = Validator::make($request->all(), [
'email' => 'required|email',
'password' => 'min:6||regex:/^(?=\S*[a-z])(?=\S*[A-Z])(?=\S*[\d])\S*$/',
], $messages);

```
 if ($validator->fails()) {          $error_msg  =   $validator->messages(
)->all();     }
```

render $error_msg to your view and write following code on view.
@if($error_msg)

  ✕

        @foreach ($error_msg as $key => $value)

  • {{ $value }}

        @endforeach

@endif
Thanks ?
